Reforma do Sistema VET na Finlândia

Title: Flexible vocational learning pathways: the Finnish VET Reform

Country: Finland

Year of implementation: 2018

The IVET reform was introduced in early 2018. Learning outcomes are at the heart of this reform, and how and where learning is acquired is not important. The new approach combines a competence-based system with flexible, individual learning pathways. The reform is a response to the increasing take-up for VET, alongside the need to use public funding more effectively. Furthermore, VET had to respond more swiftly to the changes in working life.
